Our Carbon Reduction Plan

The urgency of addressing climate change cannot be overstated.

At Primary Eyecare, we are committed to minimising our environmental impact and to contributing to a healthier planet for current and future generations.

The Path to Carbon Reduction

We are actively working on a comprehensive Carbon Reduction Plan that encompasses every aspect of our operations - from energy use to supply chain management.

Once in place, it will see us implementing a series of meaningful strategies to reduce our carbon footprint and contribute to a greener future for all. These will all aim to significantly reduce our carbon dioxide emissions, facilitate the ongoing investment in renewable energy and foster a culture of sustainability across our organisation and the communities it serves.

Next Steps

Please look out for further updates as we continue in our efforts to protect the environment and drive positive change. More information about the progress of our initiatives will be announced in the forthcoming months. We remain deeply committed to transparency and accountability throughout this process and will be issuing regular detailed updates.

Our Ongoing Pledge for a Greener Future

While our wider Carbon Reduction Plan is being finalised, we would like to emphasise our unwavering dedication to a greener tomorrow for all.

Our goal is not only to meet regulatory requirements but to exceed them, setting an example for impeccable responsible environmental stewardship within the eye health sector.

We acknowledge that meaningful change requires collaboration, and we actively invite our workforce, stakeholders, patients and the public to join us on this collective endeavour.

Thank you for supporting us on this transformative path. Together, we can create a more sustainable, resilient, and thriving world for all.
